Stain resistant treated

PRODUCT INFORMATION FABRIC & FOAM

Fabrics are made from different textile fibres, most of the time of natural fibres. Fabrics have a certain elasticity. One fabric can me more stretching then another. In using a sofa or chair, fabric will start folding. This is normal. The folding is not only caused by the fabric, but also because of the foam getting softer. Foam is made out of oil. The oil is made elastic and is in a chemical procedure blown up into a big block with cells. The cells are filled with air. When using the furniture, the cells crack, and the foam gets softer and give more comfort. In average a filling will go down in hardness and stabilize at around 85% compared to the starting fase.

With new fabrics the first fibres can come off the fabric and become small balls. This is called rubness. This is a normal characteristic of natural fabrics, and does not effect the quality the material. It is possible to skim the fabric with a small machine, so that the first rubness goes off. But in using the furniture, rubness is common. Due to the type of fibres used in a fabric, one fabric can give more rubness then the other. On a scale of 1-5 rubness is categorized. 1 = very strong rubness and 5 = hardly any rubness.

The colourfastness of a fabric is also catagorized 1 = strong colour changing and 6 = no colour changing. But all depends on where the furniture in standing in the house. On the south side where daylight, and sunlight comes in all day, will make any fabric lighter. Even if the fabric says nr. 6. In case of the south side, make sure the light is weakend by using curtains or shutters.

PRODUCT INFORMATION LEATHER & FOAM

Leather is a 100% natural product. The leather Scarpe that we use is a full anilin leather. This means that the leather is kept natural and does not have a protection layer. It is sensitive for moistures, oil and any other fluids or grease which easily are absorbed by the leather. The leather shows traces of the animals life, like insect bites, growing scars etc. The leather will become lighter in colour in using. The more sunlight the furniture gets, the faster it becomes lighter

Leather has elasticity of itself and in using the leather will become foldings. This is normal. The folding is not only caused by the leather, but also because of the foam getting softer. Foam is made out of oil. The oil is made elastic and is in a chemical procedure blown up into a big block with cells. The cells are filled with air. When using the furniture, the cells crack, and the foam gets softer and give more comfort. In average a filling will go down in hardness and stabilize at around 85% compared to the starting fase.

PRODUCT INFORMATION WOOD

Wood is a natural product that will keep shrinking and extending in youre home environment. Our tables are made of solid wood. Prevent the wood from ripping and make sure the humidity in youre home is constantly between 50% and 75%. Do not put wooden furniture nearby heaters, like radiators or fireplaces.

MICRO LEATHER (Cat 2) €50,- p/m salesprice

Composition : Faceside 96% pes 4% pu
Backing 100% recycled leather
Martindale : 30.000
Colourfastness : 3-4 (scale 1-8)

Micro Leather is a combination of fabric and leather. The backing is made out of 100% recycled leather. On the faceside is a microfiber fabric. This material is upholstered as if it were a genuine leather, but in using it behaves like a microfiber fabric. It can not be sold as genuine leather, but it has the looks of it. For maintenance, this material can be sprayed with a fluid care treatment. Price per seat € 25.

Advise for maintenance:
FABRIC CARE PROGRAM

LEATHER SCARPE (LTHR 1)

Type of skin : European full anilin wax
Thickness : 1.2–1.4 mm
Colourfastness : 3 (scale 1-8)

Leather Scarpe is a 100% natural leather, with no protection. Moisture, oil, fluids; everything will be visible in the leather. By using the leather it will age and become even more beautiful. Leather Scarpe can vary in colour between each skin. The leather samples are just an indication of how it may look. The leather can have errors like burnmarks, insectbites etc. If you want to know the exact colour in which your furniture will be made, please ask for a production leather sample. But we can not tell you what kind of mistakes the leather could have.

Advise for maintenance:
LCK 60960 KERALUX VINTAGE SET

MAINTENANCE

LCK Nederland has tested the leather types and determined which type of care product is suitable for which type of leather. You can order the products online on www.lcknederland.nl. Bodilson does not sell these products directly to its dealers, this always runs through LCK.

On this site of LCK you can also find a first aid for a stains on leather. The care products do not give a guarantee on the leather, but with proper maintenance the consumer will enjoy his furniture longer.

Important basic information for each type of leather; do not put these in direct sunlight in connection with discoloration. And ensure good humidity in the house to prevent dehydration of the leather. Do not place the furniture in the immediate vicinity of a heat source.

LCK Nederland BV
+31 571 270 327
klantenservice@lcknederland.nl

It's not possible to order loose leather skins.

LEATHER PELLE (LTHR 2)

Type of skin Brazilian semi aniline with a natural grain
 Thickness 1.3–1.5 mm
 Colourfastness 3 (scale 1-8)

Leather Pelle is a 100% natural leather, semi aniline. Semi-aniline leather is just a little bit tougher than a niline leather because its surface has been treated with a light coat that contains some pigment, which makes it more soil- and stain-resistant. While it retains the uniqueness of aniline leather, semi-aniline leather has more consistent color and is more resistant to stains. It can stand up to tougher conditions and isn't damaged as easily.
